ABSTRACT

A method, apparatus, and article of manufacture for managing electronic records on a computer network is provided. The method provides the steps of creating an electronic tag that uniquely identifies an electronic record, storing the electronic tag, and distributing the electronic record. The method further performs the steps of analyzing a network user's workstation specifications, analyzing a network user's user profile, and generating a reference code, wherein the electronic tag is generated from information analyzed in the network user's workstation specification, the network user's user profile, and the reference code.
